

Marse D-35 – Descaling Unit

Anti-Calcium Cleaner – Descaling of machines and moulds

Model: D-35 | Mobile design on castors | Acid-resistant pump without O-rings

Product description

The Marse D-35 descaling unit is the most efficient solution for the regular maintenance of the cooling water circuits of injection moulding machines, TCUs and moulds. Limescale deposits block the cooling channels and impair heat transfer. The D-35, freely movable on castors, circulates the decarbonising solution directly with its acid-resistant, O-ring-free pump – simply and quickly.

Technical features

Parameter	Value / Description
Model	D-35
Pump type	Acid-resistant, without O-rings – designed for working with acids
Mobility	On castors, freely movable – can be taken to any point of the plant
Chemical used	Decarbonising acid (Cub-net acid – optional)
Maintenance	Minimal – no sealing elements in the pump
Applications	TCUs, moulds, cooling water circuits, pipework
