

Samfacc Packaging System | Automated packaging system

Samfacc Packaging System

Automated packaging system for injection moulding lines

Full automation – from feeding to packing, without human intervention

The Samfacc automated packaging system is a complete automation solution that connects to the injection moulding line. The parts removed by the robot arm are automatically fed, counted, sorted and then packed – without human intervention. It can be customised for multiple product sizes and packaging configurations. It also meets food safety and cleanroom requirements. CE and ISO certified.

Technical features

Parameter	Value
Degree of automation	Full – without human intervention
Process	Feeding → counting → sorting → packing
Product type	Thin-wall packaging products
Configuration	Custom – according to product and production run
Integration	Can be connected to the end of the injection moulding line
Certifications	CE, ISO

Key benefits

- Full automation – no operator needed
- Meets food safety requirements
- Configurable for multiple product sizes
- Connects directly to the injection moulding line
- CE and ISO certification
- Custom design according to product

Typical applications

- Automatic packing of thin-wall packaging products
- Automation of production lines for food containers, cups and lids
- Food safety and cleanroom production lines
- High-volume products where labour costs are high
